Functionalities to be needed till 19th

1. 'SECURED' signup & login facility for the users

2. Removal of bug from homepage (i.e. while entering queries if randomly hit enter, don't show results, ask for complete filling of fields)

3. Change calander, pick any javascript for the same.

4. Make those little design chances which I have mailed you, as we are lacking front-end designer for a while but needed the product

5. Provide booking facility (take login credentials from users & send request to cab's booking server via creating a mimic)

6. Keep track of booking records, (previous booking sections)

7. Enable the review writing. (see mymiles in html pages which I have provided you, it contains 4 tabs)
